Exclusive presence for your industry

Do you want to ensure that your advertising does not go unnoticed alongside that of your competitors? We understand that very well. We can offer you industry exclusivity - contact us and we will be happy to advise you.

Production specifications for window banners

Production

Execution:

Digital printing 4-colour CMYK

Format

50 × 25 cm

Print:

Printed on the correct side on transparent self-adhesive film for dry sticking inside the vehicles. Partial white, e.g. for lettering and logos, is possible. Backing with white base film is not permitted.

Colours:

We recommend using lightfast colours for longer display periods. The proportion of colour over the entire surface may not exceed 40%. Scotch-cal film is not permitted.

Assembly and disassembly:

The banners must have a grip tab (right) for removing the film. The film must not be slit.

Transparencies that do not fulfil the requirements will be rejected. If defects only become apparent after installation, we reserve the right to charge for the additional costs of dismantling.

Features:

Film must not become milky. Removable vinyl film. The customer and producer assume responsibility for easy removal at the end of the campaign. Films with permanent adhesive are not permitted. Bonding temperature range: min. +10°C/max. +38°C. Temperature resistance: -40°C to +80°C.

Foils:

We recommend 3M IJ20-114R, JAC Graphics Serilux or Avery Greenline Transparent. Alternative products are permitted as long as they fulfil the listed requirements.
